

A new plant from Massenza is helping boost PMB production for Polish firm FART

Quality conscious FART chooses Massenza

Polish roads constructor and supplier FART has purchased a polymer modified bitumen (PMB) plant from Italian manufacturer Massenza in order to improve the quality of PMB for its road construction projects.

"Thanks to this new investment, FART can now produce PMB for its own sites increasing the quality of the final asphalt hot mixes," said FART's general manager Szczukiewicz Mirosław. "Our aim is to start a new asphalt production utilising Polymer Modified Bitumen. This will enable us to better manage the PMB production operation ensuring the highest quality of the hot mix produced by FART".

Founded in 1999, FART's business is mainly focused on road and bridge construction, stone and asphalt mixes for the road industry, concretes and special mixes, and special

industrial surfaces for parking, bus lanes and similar. With a head office located in Kielce, around 200km south of Warsaw, FART employs over 300 employees and owns two asphalt mixing plants.

Since its beginnings in 1999, FART has grown steadily over the years, with local awards and a Forbes Diamond award in 2012 recognising its impressive income growth.

The Massenza PMB plant was commissioned in the Spring, with FART reporting that its staff are very satisfied with the new equipment's performance.
